

AIRA JOSH C. YNTE

Software & AI Engineer · Computer Engineering Graduate

08airajosh@gmail.com | aera0908.github.io | linkedin.com/in/aira-josh-ynte | github.com/Aera0908
Muntinlupa, Metro Manila, Philippines

PROFESSIONAL SUMMARY

Computer Engineering graduate (Expected July 2026) specializing in software architecture, systems design, and AI integration. Experienced in building full-stack web and mobile systems, designing microcontrollers and biometrics integrations, and implementing automated language models/computer vision pipelines. Passionate about deploying high-performance, responsive software.

EXPERIENCE

Freelance AI & Software Developer

2023 – Present

Various Clients

- Integrated language models and RAG pipelines for unstructured document parsing, achieving 98.2% data extraction accuracy.
- Built MediaPipe BlazePose skeletal tracking pipelines to run real-time pose and rep analysis in mobile and web apps.
- Optimized backend processing, media asset compression (Sharp), and telemetry feeds, reducing load latency by 65%.

IC Design Intern (Design & Verification)

2025

Xinyx Design Consultancy and Services Inc.

- Designed and verified AMBA APB3 peripheral interfaces using SystemVerilog, implementing testbenches for timing constraints.

EDUCATION

Bachelor of Science in Computer Engineering

2022 – July 2026 (Expected)

Colegio de Muntinlupa — Metro Manila, Philippines

HIGHLIGHTED PROJECTS

AeroVit — Gamified AI Fitness Platform ([Live Web](#))

2024 – 2026

Role: Lead Developer & Hardware Architect

- Developed a Flutter app paired with custom ESP32-S3 smartwatch firmware over BLE to capture and stream real-time biometrics.
- Built MediaPipe BlazePose pipeline with joint-angle state machines for real-time exercise tracking and posture coaching.

Fehuvia — Open Finance Web3 B2B SME Treasury Workstation ([Live Web](#) | [Repo](#))

2026

Role: Lead Web3 & Full-Stack Developer

- Coded Solidity smart contracts on Morph L2 for stablecoin billing settlements with an EVM listener syncing to PostgreSQL.
- Integrated OpenAI GPT-4o RAG for cashflow analysis, AI OCR invoice scanning, and automated backend gas faucets.

StickOut — Interactive VLSI EDA Editor ([Live Web](#) | [Repo](#))

2026

Role: Creator & Lead Frontend Engineer

- Built browser-based VLSI stick-layout editor using raw HTML5 Canvas with viewport coordinate transforms and grid snapping.
- Programmed automatic same-layer wire crossover bridging and custom double-pass LaTeX subscript index rendering.

Plant.io — 8-Bit IoT Nursery Dashboard

2025

Role: Full-Stack Mobile & IoT Developer

- Developed a cross-platform Flutter dashboard utilizing Provider state management to display real-time sensor streams (moisture, pH).
- Configured low-latency commands over Firebase Realtime DB to actuate pumps and fans remotely, adding an 8-bit theme.

The Safehouse — Showcase & Pitch Site ([Live Web](#) | [Repo](#))

2025 – Present

Role: Frontend & 3D Web Developer

- Built interactive 3D scroll journey in React Three Fiber with procedural terrain and GSAP ScrollTrigger wired to Lenis smooth scroll.

SKILLS & COMPETENCIES

AI & Systems: OpenAI API, MediaPipe BlazePose, Prompt Engineering, RAG (ChromaDB), Digital IC Verification, SystemVerilog, DSP

Languages: TypeScript, JavaScript, Python, Solidity, SQL (PostgreSQL, SQLite), C/C++, HTML5, CSS3

Frameworks & Tools: React, Next.js, Node.js, Express, Flutter, Dart, Flame, Three.js, GSAP, Tailwind CSS, Git, GitHub Actions, Docker, KiCad

CERTIFICATIONS & TRAINING

AI Fluency: Framework & Foundations (Anthropic) · Blockchain4Youth (Bitget) · The AI Engineer Path (Scrimba) · Learn React (Scrimba) · Learn TailwindCSS (Scrimba) · Xinyx Design Intern Training · Understanding EDR Cybersecurity
